

Gorge Harbour!!

by The Stewards of Gorge Harbour Society Members!

Gorge Harbour is a special body of salt water enclosed on most of its sides by Cortes Island in British Columbia. There is a tiny opening to the Harbour, called "The Gorge", through which water is emptied and replenished as the tides rise and fall. This Harbour serves as a habitat for endless plants and animals, as well as humans who either live part-time or full-time on the Gorge or work here at local businesses or shellfish growing operations. We all share a common bond in that we value the survival of this unique place in the world. We hope you'll have fun discovering some of the words that reveal the inhabitants of the Gorge as well as words that describe just some of what we feel about Gorge Harbour, British Columbia, Canada. Have Fun!
